

SPECIAL BELTS AND DIFFERENT PRINT APPLICATIONS

Belt of special length can be made in polyurethane, with ring closure using particular hot welding procedure on the required length of belt. □

It should be remembered during the designed stage, however, that jointed belts have about 50% of the load capacity of the original belt. Applications can be fixed on the external surface of belts in polyurethane or □ other materials including para rubber, rubber, linatex, etc. by vulcanisation. □

The polyurethane applications can be moulded, if a die is available, or hot welded with moulds produced on machine tools.

EXAMPLE OF PRINT APPLICATIONS
